- Antimicrobial additive and coating (silver phosphate glass) inhibits microbial growth
- Fully sealed, silicone-rubber design eliminated contaminant-traps between keys
- Laser-etched keys for long-lasting legibility and durability
- Excellent tactile feel, with responsive entry
- Backlit keys options for low-lit environments
- Multiple keyboard layouts available

Reduce the spread of germs

Protect your staff with ioniTOUCH™ wipeable keyboards, helping encourage cleaning on a frequently touch surface. ioniTOUCH™ easy clean keyboards, enable user to wipe down the device without worry of damage.

Shared keyboards are a breeding ground for bacteria. Germs accumulated on keyboard surfaces are spread quickly around the workplace. Therefore in any environment where keyboards are present regular cleaning is crucial. Businesses that invest in washable keyboards and mice will be able to provide a safer working environment for staff and customers.

Previously cleaning of standard plastic desktop keyboards can be challenging and ineffective, the crevices under the keys collecting dirt. The fully sealed design of the ioniTOUCH™ keyboards means dirt cannot hide under the keys after cleaning. Helping keep a high-touch surface free from contaminates.
